

ABSTRACT

Distribution box connection module for telecommunications and data technology

The invention relates to a distribution box connection module (1) for telecommunications and data technology, comprising a housing in which externally accessible input and output contacts (10, 20, 30, 40) are arranged for the connection of cables and cores, with the housing having a cavity in which at least one printed circuit board (50) is arranged, with the input and output contacts (10, 20, 30, 40) being arranged on the opposite end faces of the housing, and with the input contacts (10, 20) being associated with one input side and the output contacts (30, 40) being associated with one output side, with the input contacts 10, 20) being in the form of at least two mutually opposite rows of contacts, and the output contacts (30, 40) being in the form of at least one plug connector, with at least two input contacts (10) in the first row and at least two input contacts (20) in the second row being connected to the output contacts (30; 40) in the at least one plug connector, and with the input contacts (10, 20) in the first row and in the second row being connected via the at least one printing circuit board (50) to the output contacts (30; 40) in the plug connector.
